Sequence, class and ERD rendering

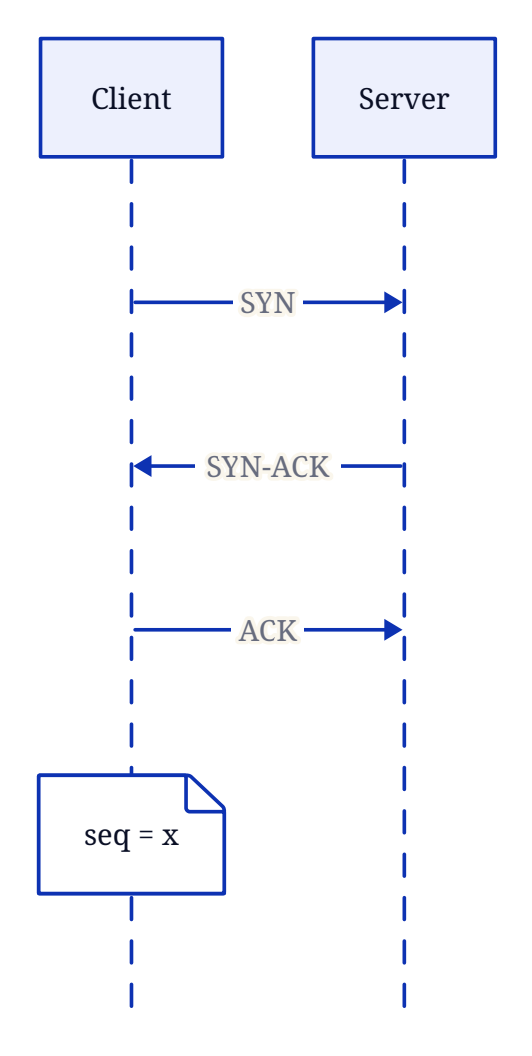

BASELINE

D2 per-kind rendering

The same guide renders one diagram of each v3 kind.

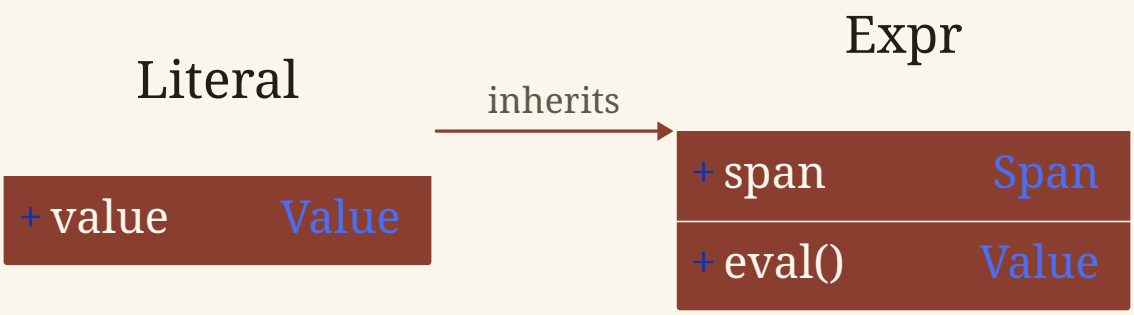

A · Rendering

The baseline verifies that the D2 v3 sequence, class and entity-relationship renderers reach the PDF with stable layout and typography. [PD0, s. 1]

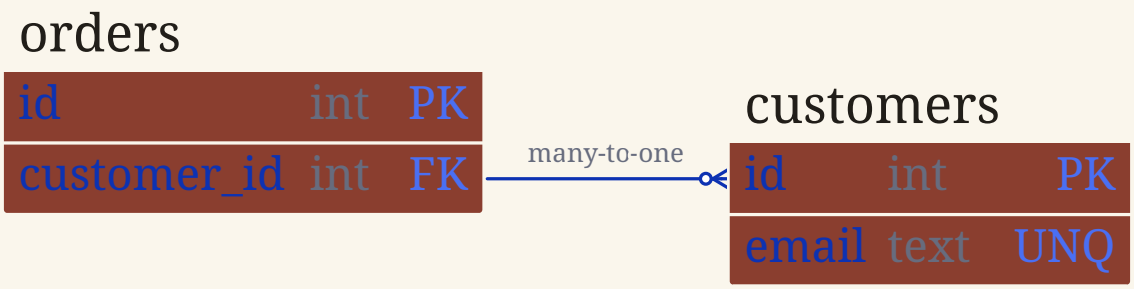

“Figure” 1 Connection setup uses three messages before data flows. [PD0, s. 4]

The sequence diagram places actors above ordered messages; the note belongs to the client lifeline. [PD0, s. 1]

“Figure” 2 Literal is a concrete Expr with a value and a shared evaluation contract. [PD3, s. 12]

The class diagram keeps fields and methods inside the class body and draws inheritance with a triangle arrowhead. [PD0, s. 1]

“Figure” 3 One customer can own many orders through the customer_id foreign key. [PD6, s. 8]

The entity-relationship diagram keeps primary and foreign keys visible and draws the many-to-one relation between orders and customers. [PD0, s. 1]
