FOLISIFT

Formula and Reference Sheet

Symbols, formulas, units and pitfalls

REFERENCE

Reference Sheet

Lookup order: symbol, formula, unit, trap.

Contents

Page numbers refer to this PDF.

Symbols

Table 0 Core symbols

SYMBOL	MEANING	UNIT
`A, B, C`	atoms	—
`(A B C)`	list	—
`quote`	preserve as data	—

PD0, p. 14

Formulas

List reading

A list `L = (x1 x2 ... xn)` has `n` top-level elements. A nested list counts as one element at the parent level.

PD0, p. 14

Evaluation rule

`(F A1 A2)` evaluates `F` as a function and applies it to the evaluated arguments. `(quote X)` returns `X` without evaluation.

PD0, p. 15

Units

Table 1 Notation conventions

FORM	READING
`(A B C)`	data list or function application
`(quote X)`	data
`(eval X)`	code

PD0, p. 14

Pitfalls

> **EXAM TRAP**
> Do not say “everything is the same” in Lisp. The representation is shared; evaluation is context-dependent. [PD0, p. 15]
