Problems

Problem 1

Read `(A (B C))` as data. How many top-level elements are there?

YOUR WORKSPACE

Problem 2

Explain why `quote` prevents evaluation. Use one example.

YOUR WORKSPACE

Worked example

FADED EXAMPLE

For `(A (B C))`, the top level has two elements: `A` and the sublist `(B C)`. The sublist has two elements. Finish the sentence: the outer list has ___ elements. [PD0, p. 14]

Practice

Problem 3

Mark each statement true or false: `(A B)` is a function application when `A` is the operator.

YOUR WORKSPACE

Answer key

ANSWER KEY

Problem 1: two top-level elements. **Problem 2:** `quote` returns the expression as data; e.g. `(quote (A B))` yields the list. **Problem 3:** true. [PD0, p. 14]
